1. Overview

This Wastewater Requirements Registry details the legal and other requirements (such as permits and plans) that the City and County of Denver (CCoD) is subject to on the Federal, State and local level. It is intended to outline these requirements from their source (such as the United States Code) to specific documents and actions that must take place in order to meet the requirements (such as permits, compliance reporting, and record keeping).

There are many aspects, including routine activities or items, at CCoD that have the potential to impact wastewater quality. These aspects are identified in the most recent version of Environmental Aspects and Impacts Assessment.

To address the legal and other requirements created by these aspects, CCoD operates the following programs:

1. Facility Compliance Program (addresses compliance for air, stormwater, hazardous waste, etc.);
2. Complaints Program (addresses environmental complaints brought by the public).

Additionally, CCoD has created and published several Environmental Guidelines (EGs) to assist in controlling the aspects referenced above to minimize impacts to wastewater. A list of EGs can be found in the Environmental Guideline Process and Catalog.
