

Darlington Fountain

The Electric fountain is in operation from Memorial Day weekend to on or around October 15th. It may be shut down earlier if there is sustained below freezing weather.

The fountain is continuously run with changing display patterns. Between 7:00am and 7:00pm there are 5 minute long displays of each of the fountain features. The fountain cycles through all its features over the course of one hour. Fountain shows begin at 7:00pm and continue to park closing at 11:00pm. The fountain lights are automatically added after dusk and accompany the shows until 11:00pm. From 11pm until 7am the next morning the fountain is set to a static display pattern which maximizes aeration for the lake and helps improve the lake water quality immensely.
