

Streetcar Concept

As part of FasTracks, the Central Corridor is proposed to be extended along Downing to connect to the future East Corridor station at 38th & Blake. The Downing segment will feature streetcar-style operations whereby a single light rail car runs in the travel lane with other vehicles. The existing Welton light rail infrastructure will be reused. The route will connect to the downtown transit loop and return.

This NEDN plan concept is a streetcar system featuring a true streetcar vehicle running in mixed traffic system-wide. Welton would be converted to two way operations, and the existing light rail infrastructure on Welton would be replaced with streetcar facilities. The streetcar could be routed to Civic Center station to relieve transit congestion in the downtown loop and provide connectivity to regional bus service.
