

2022 Denver Energy Code - Training Q&A

Commercial Contractor Training

Part Two 6/21/2023

Question	Revisions/Revised Answer
<p>We all know there are still issues with material availability, on a single project we had to re-select equipment several times during construction. Fortunately the city (under last code) worked well with us. Is this "modification" process different than what we did under the last code? It sounded like you were telling us we needed to submit for a new permit.</p>	<p>The process for submitting modified drawings has not changed. Regarding the 2022 Denver Energy Code, modified drawings are required if revisions change either the C406 Additional Energy Efficiency Credits for prescriptive compliance or the performance of the project using a performance compliance pathway.</p> <p>See the Resubmittal section of the Commercial Permitting Handbook: https://www.denvergov.org/files/assets/public/community-planning-and-development/documents/ds/other-forms-and-guides/commercial_permitting_handbook.pdf</p>
