*As with all design and construction projects schedule indicated above is an estimate only. Many factors can cause delays in the delivery of the project, and schedules are subject to change.

Brief project description

The Urban Ecology team is restoring 2.9 acres of native landscape along the southern and eastern edges of the City of Chennai Park. The team will also explore a landscape transformation for approximately one half-acre of non-functional bluegrass turf into native prairie with grasses and wildflowers. These efforts will create a “Uniquely Denver” experience that should reduce irrigation needs, create wildlife habitat, improve water quality, and provide the neighborhood with better access to nature.
